

Who we are

We have many years of experience in the implementation of decision support systems (**MIS**), **big data** and **machine learning** algorithms for **prediction**, **classification** and **optimization**.

We support large and dynamically growing enterprises in all industries.

Business Intelligence

Data Warehousing

Big Data

Artificial Intelligence

Data Science

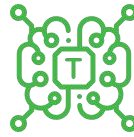

Cloud

Services

Predictive modeling

Optimize business processes using machine learning algorithms.

Video and text processing

We build custom NLP and Computer Vision algorithms to extract knowledge from text and images.

Recommendation engines

Our systems help to increase sales and personalize offer to your customers.

Big Data applications

We help companies to gain insights from big data sources and streaming applications.

Enterprise Data Warehousing

Automated reporting and data integration from various sources.

OLAP cubes

Multidimensional data analysis, drill down and data mining.

Sample case studies

- Customer churn prediction (e.g. banking, telecommunications)
- Demand prediction using Machine Learning algorithms
- Anomaly Detection (e.g. energy volume usage)
- Production and inventory management optimization
- Streaming application from IoT data sources
- Management Information System (MIS) for big enterprise (manufacturing)
- Data Lakes for banking industry

We are a Microsoft partner and have certified specialists
